MEMORANDUM FOR THE RECORD

BX6858 wrap up
20-22.

SUBJECT: Pilots Debriefing Tape for BLACK SHIELD Mission BX6858

1. The following comments regarding target weather have been extracted from the pilots debriefing tape for BX6858.

2. The comments are quotes and in response to questions asked during the debriefing immediately following the flight.

SENSITIVE DEBRIEFING

25X1 [] " How was the weather [] ? " 25X1

25X1 [] " All for all, better than forecast. General pattern was as briefed. On the first pass I picked the coast up from the time I rolled out of the turn. North of my pass it was completely clear..... The south half of Wonsan harbor extending inland just a little ways, there was a fairly good cloud, otherwise it was all clear. For all practical purposes it was a clear run all the way across the first pass- occasional little piece of cloud here and there but real heavy haze. Actually as I would look south of me it appeared to be a cloud line not very far south but that could have been sun angle thru this haze. Looking north it was clear all the way thru - I was pretty well convinced then that my second pass would be over clouds. However, again I could see the ground all the way across and again it

Page 2

looked like the cloud line was just south of me."

PACKAGE I DEBRIEFING

25X1

" Operated normal? "

"Yes, left it on about 50 miles further than planned....."

" Operated in cloud position? "

" Operated in cloud because the target area was either
a thin cirrus or heavy haze layer. I could see the ground almost 100%
Very hazy. "
